

Artitecture Model

1. User Interface Agent

- Takes user input
- Sends request to backend (/chat)
- Displays response

2. API Gateway Agent

Code responsible:

- FastAPI()
- Route handling (/chat)

What it does:

- Receives request
- Validates input using BaseModel
- Passes query forward

3. Input Structuring Agent (Pydantic)

```
class ChatRequest(BaseModel):  
    message: str
```

What it does:

- Ensures clean input
- Prevents invalid data

This acts as a Validation Agent

4. Configuration Agent

```
load_dotenv()  
os.getenv("GROQ_API_KEY")
```

What it does:

- Loads API keys
- Manages environment

This is acts as a Security / Config Agent

5. AI Execution Agent

```
client = Groq(api_key=...)
```

What it does:

- Sends prompt to LLaMA
- Gets response

6. Response Generation Agent (llama)

Inside Groq call:

- Understands query
- Applies financial reasoning
- Generates answer
